

On/Off Fan Drives vs the competition

On/Off Fan Drives beat the competitor

1

Modular design means reduced service time On/Off fan clutch friction linings can be replaced without taking the clutch off the vehicle. This reduces lining service to just ten minutes.

Higher dynamic torque capacity The dynamic capacity of the On/Off clutch is higher than the competitors, who only state 'out of box' torque. BorgWarner delivers performance when you need it.

2

Hub bearing reliability BorgWarner's bearing design has been industry-leading for 10 years, while the competition continually changes theirs to meet our high standard.

Reduced wear on accessory belts and tensioners The On/Off's patented self-regulating operation provides softer engagement than the competition.
